

FEARLESS  
HEALTH

Capabilities

Fearless Health understands the unique challenges that face our nation's healthcare system when it comes to developing tools that promote quality, accessible and efficient health care provision.

## Process and Automation Consulting

We are a diverse team of skilled health, healthcare, and information technology consultants who harness the power of technology to create more efficient health solutions. We believe automation of healthcare processes can improve productivity and quality of the healthcare system.

## Continuous Quality Improvement

At Fearless we create innovative models of health care and health care technology delivery that promote quality care provision. We create and enforce a metrics based approach to measure improvements in patient outcomes.

## Health and Wellness

Preventative care is the backbone to any health and wellness initiatives. We strive to ensure patients utilize urgent and acute care less and seek evaluation from their primary care providers more by providing education on preventative care to patients.

---

### Specialties

**Workflow Optimization** – Clinical care workflow efficiency models that lead to improved productivity

**EHR Template Design** – EHR template designs and modifications to improve efficiency, quality and productivity

**Quality Automation** – Automated Quality measures selection and reporting

---

### Specialties

**Performance Improvement Initiatives** – We plan, implement, and automate the Plan, Do, Study, and Act methodology (PDSA) to lead performance improvement initiatives.

**Quality Metrics Identification** – We establish and use technology to monitor quality metrics that benefit your organization and patients that align with the NCQA HEDIS measures.

**Joint Commission Accreditation** – We can lead your organization in attaining and maintaining Joint Commission Accreditation.

**Clinical Peer Review** – We are very well equipped to perform clinical peer reviews to determine if clinicians are meeting standards of quality.

---

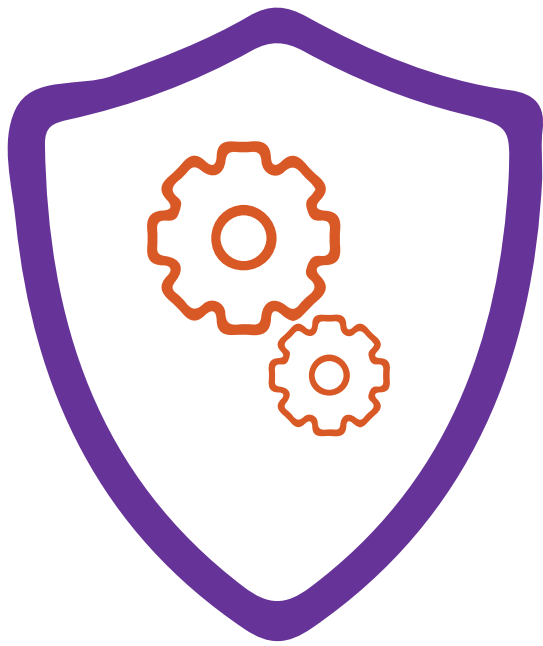

### Specialties

**Health and Wellness Research** – We stay up to date on most recent healthcare advances and present relevant information.

**Health IT Evaluations and Recommendations** – We provide consultants to make clinical recommendations for implementation within organizations.

**System Augmentation** – We align internal systems to better track and monitor health and wellness systems and outcomes.

---
